————— LSProbe 1.2 —————

**Electric-Field Probe  
(10Hz) 9kHz - 8.2GHz**

The LSProbe 1.2 Field Probe is a high speed, high accuracy and high dynamic range electric-field probe. Its standard frequency range of 9 kHz – 8.2 GHz can be extended to 10 Hz – 8.2 GHz. Best-in-class compensation of linearity, frequency and temperature guarantees accurate measurements from less than 0.1 to at least 1,000 V/m. A dynamic range of 100 dB is achieved for many frequencies, enabling field measurements at more than 10,000 V/m.

Customized high field-strength “X”-variants, supporting up to 30,000 V/m and a damage level of 100,000 V/m, are available upon request. Please contact LUMILOOP support for detailed information.

A single axis, continuously sampling mode, operating at 2 MS/s, can be used for Equivalent Isotropically Radiated Power (EIRP) measurements of IoT products without antenna connectors in accordance with EN 300 328 and EN 301 893.

Laser-powered operation eliminates battery recharging and replacement. Extensive in-house calibration data are provided with each field probe and is handled automatically by the LSProbe Software (TCP Server and GUI). Third-party EMC-software support for R&S EMC32, R&S ELEKTRA, Emcware, BAT-EMC, Tepto, Tile, Win6000, Compliance5/6, ProveEMC, Radimation and RAD-LAB.
